Einbausatz Xenon-Licht mit automatischer Leuchtweitenregulierung

BMW 5er-Reihe (E39) LHD
BMW 5er-Reihe (E39/2) LHD

Installation kit - xenon headlights with automatic headlight range adjustment
BMW 5 Series (E39) LHD
BMW 5 Series (E39/2) LHD

Kit de montage des phares au xénon avec correcteur de site automatique
BMW Série 5 (E39) Direction à gauche
BMW Série 5 (E39/2) Direction à gauche

Inbouwset Xenon-licht met automatische lichtbundelafstelling
BMW 5-serie (E39) LHD
BMW 5-serie (E39/2) LHD

Monteringssats för xenon-ljus med automatisk ljuslängdsreglering
BMW 5-serien (E39) LHD
BMW 5-serien (E39/2) LHD

Kit di montaggio luce allo xeno con regolazione automatica della portata fari
BMW Serie 5 (E39) LHD
BMW Serie 5 (E39/2) LHD

Juego de montaje de luz de xenón con regulación automática del alcance de las luces
BMW Serie 5 (E39) volante de dirección a la izquierda
BMW Serie 5 (E39/2) volante de dirección a la izquierda

Kit de montagem, luz de xénon com regulação automática da altura dos faróis
BMW Série 5 (E39), viatura com volante à esquerda (LHD)
BMW Série 5 (E39/2), viatura com volante à esquerda (LHD)
1. Important Information

Intended for use in BMW dealership network only.

Specialist knowledge as well as knowledge of the vehicle electrical system required.

These installation instructions apply only to left-hand drive (LHD) vehicles.

Installation time required 2.0 hours.
The installation time may vary depending on the condition and equipment of the vehicle.

⚠️ This installation kit may only be installed in conjunction with a headlight washer system.
  - Option SA 500 headlight washer system must be retrofitted first if the vehicle was not equipped with this optional extra in series production or if SA 500 headlight washer system has not been retrofitted, as the installation kit xenon headlight with automatic headlight range adjustment must only be installed in conjunction with SA 500 headlight washer system.
  - If installed, the latent heat accumulator must also be removed from the vehicle. The latent heat accumulator must be removed and installed in accordance with the instructions provided in the currently applicable Repair Instructions.
  - Make sure that the warning sticker provided in the installation kit is affixed to the cross member above the headlight.
  - This xenon headlight installation kit does not require encoding. Instructions for checking the level sensor and the cold light scan module are provided in Section 2.4 and in the information leaflet (Section 4).
  - If changes are made to the running gear or repairs conducted on the rear axle, the adjustment procedure for the level sensor must be carried out as described in Section 2.4 and in the information leaflet (Section 4).
  - Place the information leaflet (Section 4) and the white 2-pin socket housing (wire jumper, red wire) unplugged during the adjustment procedure in the car's glovebox so that readjustment can be carried out if necessary.

Safety notes

Particular care must be taken when installing cables/lines to ensure they are not kinked, bent or damaged.
Additionally installed cables/lines must be secured with cable straps.

On no account use "Scotchlock quick-action connectors" as they can cause interference and disturbances in the vehicle electrical system.

If specified pins or slots are already used, corresponding jumpers, double crimp or parallel connections are to be used. To avoid problems, make sure you follow the specified cable routes in the vehicle precisely.

Subject to technical modifications
## 2.1 Connections overview of xenon headlight wiring harness

### Notes
Refer to general information as well as safety notes in Section 1.

2.2 Installation of xenon headlight

Notes
Refer to general information as well as safety notes in Section 1.

Open out fold-out page!  (Page 2-23)

The description of the installation procedure refers to the left-hand side of the vehicle. The same procedure is to be carried out analogously when installing on the right-hand side of the vehicle.

Fig. A to Fig. D shows the removal of the halogen headlights.
Fig. E to Fig. G shows the mounting of the cold light scan module on the xenon headlights.
Fig. H to Fig. I shows the installation of the xenon headlights.

Continue with Section 2.3
2.3 Installation of level sensor

Notes
Refer to general information as well as safety notes in Section 1.

Preparation
Remove rear right wheel

Open out fold-out page! (Page 2-27)

Continue with Section 2.4
2.4 Installation of xenon headlight wiring harness

Notes
Refer to general information as well as safety notes in Section 1.

Preparation
Print out fault code memory
Disconnect battery
Remove front right wheel
Expose wipe/wash reservoir on right-hand A-pillar behind the wheelhouse cover and remove wipe/wash reservoir
Expose light module at right-hand A-pillar in vehicle interior
Expose ground terminal point in front area of right-hand entrance

Open out fold-out page!  (Page 2-51)

Fig. A
The figure shows the front passenger’s footwell. Fold back carpet (1) in front passenger’s footwell on left next to A-pillar and remove cover (2).

Fig. B
Only for vehicles up to production date 9/98 equipped with SA 500 headlight washer system in series production.
Mark hole (1) at distance A and in centre with respect to existing rubber grommet (2), centre punch and drill a 30 mm dia. hole (1) using a step drill. Debur hole, carefully remove drill swarf and treat blank points with BMW approved corrosion protection measures.

A = 25 mm

⚠️ Take particular care while drilling to ensure that the cables and hoses in the front right wheelhouse are not damaged.

Fig. C
Only for vehicles from production date 9/98 equipped with SA 500 headlight washer system in series production.
Mark hole (1) in centre of recess (2), centre punch and drill a 30 mm dia. hole (1) using a step drill. Debur hole, carefully remove drill swarf and treat blank points with BMW approved corrosion protection measures.

⚠️ Take particular care while drilling to ensure that the cables and hoses in the front right wheelhouse are not damaged.

Fig. D
Only on vehicles with retrofitted SA 500 headlight washer system.
Press grommet (1) into vehicle interior and then push back connector (2) for washer fluid pump of headlight washer system through opening into vehicle interior.
Fig. E
Route xenon headlight wiring harness A from level sensor (1) along the brake line on the right-hand side of the vehicle to the front right wheelhouse and secure with cable straps. Route branches A2 to A9 through the 30 mm dia. hole (3) in the wheelhouse into vehicle interior. Fit rubber grommet (2) on xenon headlight wiring harness A in the 30 mm dia. hole (3) and install the wipe/wash reservoir. Connect branch A10, black 2-pin socket housing of xenon headlight wiring harness A, to washer fluid pump for headlight washer system.

⚠ On vehicles equipped in series production with SA 500 headlight washer system insulate and tie back branch A10, black 2-pin socket housing of xenon headlight wiring harness A (not required).

Fig. F
Using side cutter (3) cut off displaced connector 1 shown in Fig. D for washer fluid pump of headlight washer system. Strip insulation from the two free wire ends (4) and crimp on 1-pin socket contacts (2) provided. Now plug socket contacts (2) into provided black 2-pin socket housing, plug in branch A8 and lock socket housing.

Brown wire in PIN 1
Black/brown wire in PIN 2

Connect branch A8, black 2-pin socket housing with connected socket contacts (2) to branch A9, black 2-pin pin housing of xenon headlight wiring harness A.

Fig. G
Unplug white 15-pin connector X38 from light module (2), open and release. Unplug existing 1-pin socket contact (3) from plug-in slot PIN 3, yellow/blue wire, of white 15-pin light module connector X38. Connect unplugged 1-pin socket contact (3), yellow/blue wire, to supplied black 1-pin socket housing (1). Plug branch A5, 1-pin socket contact, yellow/blue wire, of xenon headlight wiring harness A into white 15-pin connector X38 at plug-in slot PIN 3. Lock white 15-pin connector X38, close and connect to the light module. Connect black 1-pin socket housing (1) with connected 1-pin socket contact (3), yellow/blue wire, from white 15-pin connector X38 to branch A4, black 1-pin pin housing, yellow/blue wire of xenon headlight wiring harness A.

Fig. H
Unplug and open black 54-pin connector X10117 of light module (1). Connect branch A6, free wire end, yellow/red wire, of xenon headlight wiring harness A with double insulation displacement connector (2) to yellow/red wire, plug-in slot PIN 34, of black 54-pin connector X10117 (if necessary, open up the wiring loom of black 54-pin connector X10117 a little to facilitate the insulation displacement connection). Close black 54-pin connector X10117 and connect to the light module.

⚠ The free wire end of branch A6 must not protrude from the insulation displacement connection.

Fig. I
Firmly secure branch A7, 6 mm diameter cable eye, brown wire of xenon headlight wiring harness A at ground terminal point X10012 in front area of right-hand entrance.

Fig. J
Remove instrument cluster cover (1). Unclip the control unit for manual headlight range adjustment (2), disconnect and replace by the supplied cover (3). Insulate unplugged wiring loom and tie back. Reinstall instrument cluster cover (1).

Adjustment
Reassemble vehicle in reverse order of removal and connect battery as it must be moved for the adjustment procedure.

⚠ The footwell on the right-hand side of the vehicle, however, must remain open for the adjustment.

Now move vehicle and carry out the adjustment procedure described under Fig. K.
Fig. K

The vehicle should be parked unladen on a flat and even surface for the purpose of automatic adjustment of the level sensor. Disengage gear or selector lever in position "N", Release handbrake and start vehicle. Make sure that the battery voltage is not below 13.0 V for the adjustment of the level sensor (battery must be charged). Unplug branch A3, white 2-pin socket housing (wire jumper, red wire) from branch A2, white 2-pin pin housing of xenon headlight wiring harness A. The adjustment is now completed. Now connect white 2-pin socket housing (3) (Dummy, green wire) to the now free branch A2, white 2-pin pin housing of xenon headlight wiring harness A.

**Electrical adjustment is now functional.**

Park vehicle and switch off ignition.

Install light module and tie back branches A2 to A9 of xenon headlight wiring harness A with cable straps.

⚠️ Place disconnected branch A3, white 2-pin socket housing (wire jumper, red wire) and the information leaflet (Section 4) in the car's glovebox as the adjustment procedure must be repeated in the event of any changes made to the chassis or repairs carried out on the rear axle. ⚠️

Fig. L

**This figure contains information for checking the cold light scan module**

If the message "check low beam headlight or the symbol" appears in the instrument cluster display, it is possible that fuse (1) in the cold light scan module (2) is defective (500 mA slow-blow fuse). After replacing the fuse, there still may be a fault in the cold light scan module or in the xenon headlight (replace cold light scan module or xenon headlight).

Fig. M

**This figure contains information for checking the level sensor**

The level sensor in the rear right wheelhouse is checked as follows:
- Expose light module (1) in right-hand A-pillar.
- Park unladen vehicle on flat and even surface.
- Disengage gear or selector lever in position "N" and release handbrake.
- Connect voltmeter between branch A6, yellow/red wire of xenon headlight wiring harness A and ground.
- Start vehicle.
- Measure voltage (setpoint 1.0 V);  
- Luggage compartment laden with 150 kg (2 persons).
- The voltage value **must** increase (approx. 1.2 to 2 Volt) after 20 seconds.
- If the voltage does not increase, either the control rod is detached (fixed) or the level sensor is defective.

Concluding operations

Reassemble footwell on right-hand side of vehicle.

Reconnect battery.

Carry out function check.

Print out fault code memory.

Adjust headlight with headlight adjuster (the headlights must be set mechanically to H-1%).

Encoding

This system **does not require encoding.**

X10012 6 mm dia. cable eye, ground connector X10012

The items marked with * refer only to this circuit diagram. All other items correspond to the BMW Service circuit diagrams.
4. Information leaflet (to be kept in vehicle)

Adjustment

Before carrying out the adjustment, the vehicle must be moved and the light module at the bottom of the right-hand A-pillar exposed. Disconnect white 2-pin socket housing (3) (Dummy, green wire) from branch A2, white 2-pin pin housing of xenon headlight wiring harness A and connect white 2-pin socket housing branch A3 (wire jumper, red wire) kept in the glovebox to branch A2, white 2-pin pin housing of xenon headlight wiring harness A. The vehicle should be parked unladen on a flat and even surface for the purpose of automatic adjustment of the level sensor. Disengage gear or selector lever in position "N", Release handbrake and start vehicle. Make sure that the battery voltage is not below 13.0 V for the adjustment of the level sensor (battery must be charged). Disconnect branch A3, white 2-pin socket housing (wire jumper, red wire) from branch A2, white 2-pin pin housing of xenon headlight wiring harness A, white 2-pin pin housing of xenon headlight wiring harness A.

The adjustment is now completed. Reconnect white 2-pin socket housing (3) (Dummy, green wire) to free branch A2, white 2-pin pin housing of xenon headlight wiring harness A.

Electrical adjustment is now functional.

Park vehicle and switch off ignition.

Place disconnected branch A3, white 2-pin socket housing (wire jumper, red wire) and the information leaflet (Section 4) in the car’s glovebox as the adjustment procedure must be repeated in the event of any changes made to the running gear or repairs carried out on the rear axle.

Reinstall the light module and adjust headlights with headlight adjuster (the headlights must be set mechanically to H-1%).

Encoding
This system does not require encoding.

Notes on checking cold light scan module

If the message "check low beam headlight or the symbol" appears in the instrument cluster display, it is possible that fuse (1) in the cold light scan module (2) is defective (500 mA slow-blow fuse). After replacing the fuse, there may still be a fault in the cold light scan module or in the xenon headlight (replace cold light scan module or xenon headlight).

Notes on checking the level sensor

The level sensor in the rear right wheelhouse is checked as follows:
- Expose light module (1) in right-hand A-pillar
- Park unladen vehicle on flat and even surface
- Disengage gear, release handbrake
- Connect voltmeter between branch A6, yellow/red wire of xenon headlight wiring harness A and ground.
- Start vehicle
- Measure voltage (setpoint 1.0 V)
- Luggage compartment laden with 150 kg (2 persons)
- The voltage value must increase (approx. 1.2 to 2 Volt) after 20 seconds.
- If the voltage does not increase, either the control rod is detached (fixed) or the control sensor is defective.
